

## Introducing: Simon Cooper Graduate Quantity Surveyor

### Working at Evers

Having worked for T J Evers for four years I have gained experience on varied construction contracts such as commercial projects, social housing and industrial new build projects.

I am currently responsible for managing a number of sub contractor accounts, dealing with tender packages, evaluating & conducting value engineering exercises, order placement, site measured valuations and final accounts. I also carry out contract valuations & variation costing.

The Evers management team has continually offered me support & guidance, passing on knowledge & experience to facilitate the completion of my degree. During my critical final year, the managers assisted in giving me direction and offering their expertise with regards to my dissertation. They also assessed my workload ensuring the combination of academic studies and office workload was not overwhelming at this crucial time.

During my Quantity Surveying degree I have studied modules on: law, management, construction technology, economics & surveying along with honing my public presentations skills. Whilst attending university I have developed an effective process to manage my time, which has enabled me to meet strict deadlines.

### Outside of work

I'm happily married and an active member of my local church. I enjoy many outdoor sports, including racing my mountain bike, playing golf, and watching motorsport. I also spend many hours walking my dog.
